Powerful laser sensors for special applications

optoNCDT 17x0 / optoNCDT 1910

The optoNCDT 1910, 1710 and 1750 series laser sensors are designed for fast and precise measurements in industrial applications. The models are used for demanding surfaces and impress in measurements where large distances are required. Innovative evaluation algorithms and improved components enable high accuracy and dynamics. The high-performance optical system generates a small light spot onto the target which enables the detection of even the smallest of components reliably. The pigtail cable in conjunction with the internal controller reduces the installation effort for the sensors to a minimum.

The intelligent exposure control for demanding surfaces

The optoNCDT 1750 sensors feature real-time surface compensation. The real-time surface compensation feature (RTSC) determines the amount of reflection from the target surface during continuous exposure and in real-time. The exposure time or the amount of light produced by the laser is optimally matched to the reflection characteristics of the target surface. This enables extremely reliable measurements even on reflecting surfaces. The optoNCDT 1910 sensors use Advanced Surface Compensation and are also highly resistant to ambient light.

Ideal for industrial applications

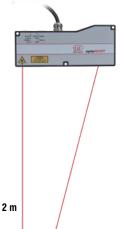

Different output signals enable the integration of the sensor into plant and machine control systems. As well as analog voltage and current outputs, a digital interface provides distance information from the sensor. Due to the universal setting and evaluation possibilities, the sensors meet all the requirements for use in industrial applications.

Model	Technology	Measuring range	Repeatability	Linearity
optoNCDT 1750BL		2 - 750 mm	0.8 μm	from 0.06 %
optoNCDT 1750-DR		2 - 20 mm	0.1 μm	0.08 %
optoNCDT 1710		50 mm	from 7.5 μm	0.10 %
optoNCDT 1710BL	1/4	50 / 1000 mm	7.5 μm	from 0.10 %
optoNCDT 1760	1/4	1000 mm	from 7.5 μm	0.10 %
optoNCDT 1910	1/2	500 / 750 mm	from 20 µm	0.07 %

Large distance and large measuring range

The optoNCDT long-range models are used to cover a large measuring range or to measure from a large distance to the target. The long-range laser sensors combine high accuracy and large measuring distances.

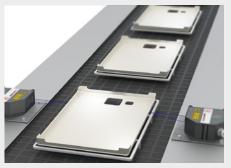

Measurement distances up to 2 m

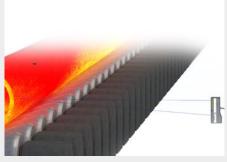

Application examples

Geometry testing of reflective glass parts

Position check of plastic components

Position measurement of red-hot glowing pipes

Technical data

optoNCDT 17x0 Laser sensors for large measuring ranges

Digital interface [5] RS422 (16 bit) / EtherCAT / PROFINET / EtherNet/IP	in;
- 9	
Analog output 4 20 mA / 0 5 V / 0 10 V (16 bit, freely scalable within the measuring range)	
Switching outputs (error & limit value): npn, pnp, push pull	
Connection integrated pigtail 0.25 m with 14-pin ODU connector, min. bending radius 30 mm when firmly installed; optional extension to 3 m / 10 m possible (see accessories for suitable connection cables)	
Installation Screw connection via three mounting holes	
Storage -20 +70 °C (non-condensing)	
Temperature range Operation 0 +50 °C (non-condensing)	
Shock (DIN EN 60068-2-27) 15 g / 6 ms in 3 axes	
Vibration (DIN EN 60068-2-6) 2 g / 20 500 Hz	
Protection class (DIN EN 60529)	
Material Aluminum housing	
Weight approx. 800 g (incl. pigtail)	
Select & function keys: interface selections, mastering (zero), teach, presets, quality slider, frequency selection, control and indicator elements [6] settings; web interface for setup: application-specific presets, peak selection, video signal, freely selectable averages possibilities, data reduction, setup management 2 x color LEDs for power / status	

 $^{^{[1]}}$ Factory setting 5 kHz, modifying the factory setting requires the IF2001/USB converter (see accessories)

^[2] FSO = Full Scale Output; the specified data apply to white, diffuse reflecting surfaces (Micro-Epsilon reference ceramic for ILD sensors)

^[3] Measuring rate 5 kHz, median 9

 $^{^{[4]}}$ ±10 %; SMR = Start of measuring range; MMR = Mid of measuring range; EMR = End of measuring range

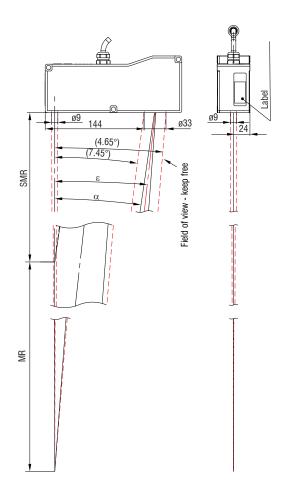

^[5] EtherCAT, PROFINET and EtherNet/IP require connection via interface module (see accessories)

 $^{^{\}rm [6]}{\rm Access}$ to web interface requires connection to PC via IF2001/USB (see accessories)

Accessories

optoNCDT

IF2035: Interface module for Industrial Ethernet connection

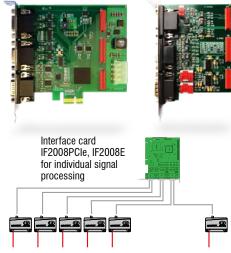

- Connection of RS422 or RS485 interfaces to PROFINET / Ethernet/
 IP / EtherCAT
- Synchronization output for RS422 sensors
- 2 network connections for different network topologies
- Data rate up to 4 MBaud
- 4-fold oversampling (with EtherCAT)
- Ideal for confined spaces due to a compact housing and DIN rail mounting

IF2008PCIe/IF2008E:

Interface card for synchronous data acquisition

- IF2008PCle Basic PCB: 4 digital signals and 2 encoders
- IF2008E Expansion board: 2x digital signals, 2x analog signals and 8x I/O signals
- Absolutely synchronous data acquisition for multi-channel applications (e.g. for planarity or thickness measurement)

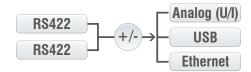

Dual Processing Unit: Controller for D/A conversion and evaluation of up to 2 sensor signals

- Fast D/A conversion (16 bit, with a maximum of 100 kHz) of 2 digital input signals or calculation of 2 digital sensor signals
- Averaging functions and calculation of thickness, step, diameter, ovality and radial run out
- Trigger input
- Multi-function output
- Measurement value output via Ethernet, USB, analog output 4 ... 20 mA/0 ... 5 V / 0 ... 10 V / ±5 V / ±10 V (scalable via web interface)
- 2x switching outputs for sensor or Dual Processing Unit status
- Parallel data output via three output interfaces
- Two filter possibilities
- Post-linearization of measured values or calculated values
- Easy parameter setting via web interface (controller and sensors)

available from April 2024

IF2008/ETH: Interface module for Ethernet connection of up to 8 sensors

- Integration of eight sensors or encoders with RS422 interface in Ethernet network
- Four programmable switching in-/outputs (TTL and HTL logic)
- Fast data acquisition and output up to 200 kHz
- Simple parameter set up via web interface

IC2001/USB Single-channel converter cable RS422/USB

- Conversion from RS422 to USB
- 5-core interface cable without outer shield
- Easy sensor connection via USB
- Supports baud rates from 9.6 kBaud to 1 MBaud
- Ideal for integration into plant and machinery

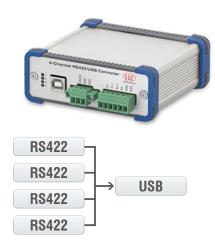

IF2001/USB: Interface module from RS422 to USB

- Conversion from RS422 to USB
- Signals and functions such as laser on/off, switch signals and function output
- Supports baud rates from 9.6 kBaud to 12 MBaud
- Robust aluminum housing
- Easy sensor connection via screw terminals (plug and play)
- Parameter setting (converter and sensors) via software

IF2004/USB: 4-fold interface module from RS422 to USB

- Conversion of 4 digital signals (RS422) to USB
- 4x trigger inputs, 1x trigger output
- Synchronous data acquisition
- Parameter setting (converter and sensors) via software

Connection of 4 sensors via IF2008-Y-adapter cable

Compact protective housing which is simply attached to the sensor. The protective housing has an air purge for cleaning the protective windows. It also cools the sensor. Suitable for ILD1900-2 / -2LL ILD1900-6 / -6LL ILD1900-10 / -10LL ILD1900-50 / -50LL ILD1900-100 ILD1900-200 ILD1900-500

sensorTOOL

The Micro-Epsilon sensorTOOL is a powerful software that is used to operate one or more optoNCDT sensors. The sensorTOOL can be used to access the sensor connected to the PC, display its complete data stream and save it in a file (in Excelcompatible CSV format). The sensor is configured via its web interface.

Free download

All software tools, drivers and documented driver DLL for easy integration of the sensors into existing or internally-generated software are available free of charge under www.micro-epsilon.de/download

Sensors and Systems from Micro-Epsilon
